

Climate justice

Climate change is happening now and to all of us. No country or community is immune. Majorly, the poor and vulnerable countries in the global southern region suffer the greater effect. The impacts of climate change cannot be borne equally. Disparities have been felt between the rich and poor, women and men, and older and younger generations. Climate change increases poverty and endangers life. The contribution of Africa to the total greenhouse gas emission worldwide is about 4% but most countries in Africa are greatly affected by the effects of the climate change by not having the financial means needed for protection measures and cost of adjustment. Climate justice deviates conversation from greenhouse gases and melting ice caps into a civil rights movement with the people and communities most vulnerable to climate impacts at its heart.

This can be witnessed by the mass world-wide marches, strikes and protests by thousands of school children and this depicts the intergenerational injustice of climate change. During the workshop we shall be looking at the concrete effect of climate change, adaptation and mitigation in Nigeria. We will discuss about our CO₂ footprint and Ways to climate justice.

Referent **Okiemute Onoyiwe**

ist in Nigeria geboren und aufgewachsen. Er hat seinen Bachelor in Mikrobiologie in Nigeria gemacht und studiert jetzt an der CAU in Kiel im Masterstudiengang Umweltmanagement.
